

**PLM-MSP-WIFI**

## WIFI AUDIO TRANSMITTER & RECORDER

This small wifi transmitter allows you to remotely listen to conversations from any place in the world in real time. Using the supplied APP for mobile phones, it also allows you to start recording a conversation and download it remotely. The wireless spy microphone is suitable for listening to conversations in the cars, homes and offices.

The main feature of wifi bugs is that they are able to transmit sounds and/or images through the wifi network and further over Internet. These transmitters, in the presence of a good wifi connection, allow you to obtain very high quality audio results.

Furthermore, wireless bugs of this kind guarantee high efficiency and reliability. Due to the widespread use of wi-fi networks in both home and office environments, these wireless spy microphones are much more difficult to detect during a TSCM inspection.

**PLM-MSP-WIFI**

**Main Product features:**

- Allows you to listen to conversations from any place in the world in real time via Internet using your mobile phone and/or tablet.
